LIITE: Laskentapisteluettelo

MAANTIELIIKENTEEN VAIHTELUMUODOT 1981

0. Yleistä

Tie- ja vesirakennuslaitos suorittaa vuosittain tarkkailevaa liikennelaskentaa. Tarkkailulaskentojen tärkein tehtävä on liikenteen kehityksen seuranta ja liikenteen vaihtelumuotojen selvittäminen. Koska laskennat suoritetaan käsin, saadaan tulokset ajoneuvoryhmittäin eriteltynä. Vuonna 1981 suoritettiin liikenteen vaihtelumuotojen kartoitus, jonka tulokset esitetään tässä raportissa.

Tarkkailulaskentapisteitä oli yhteensä 127. Pisteet jakautuivat siten, että valta- ja kantateillä oli 63 pistettä ja muilla maanteillä 64 pistettä. Pisteluettelo on liitteenä.

Laskentapisteet on valittu systemaattisella otannalla maantieverkolta. Pisteet sijaitsevat tieosilla ja liikennemäärät lasketaan ajosuunnat eritellen, mutta tässä raportissa käsitellään ainoastaan poikkileikkausliikennemäärän (kummatkin ajosuunnat yhteensä) vaihteluja.

Laskentaohjelma on vuonna 1981 ollut seuraava: maalis-, kesä-, elo- ja lokakuussa suoritettiin kuukauden puolivälissä yhden arkivuorokauden (06-06) ja viikonlopun (pe-su) kattava 4 vrk:n laskenta. Muina kuukausina suoritettiin niinikään kuukauden puolivälissä yhden arkipäivän päivälaskenta (06-22).

Tässä raportissa on esitetty liikenteen keskimääräiset vaihtelumuodot (tunti-, viikonpäivä- ja kausivaihtelut) neljässä ositteessa. Ositejako perustuu alueeseen ja tieluokkaan. Aluejakona on Etelä-Suomi (piirit 01-05) ja muu Suomi (piirit 06-14) sekä tieluokkajakona päätieverkko (valta- ja kantatiet) ja tavalliset maantiet.

Vuoden 1981 laskennoista on tässä raportissa esitetty olennaisin osa keskimääräisistä vaihtelumuodoista. Pistekohtaiset liikennemäärät ja vaihtelumuodot ovat saatavissa ao. TVL:n piirissä. Yksityiskohtaisempaa tietoa haluttaessa voi kääntyä TVH/Tt:n puoleen, jonne myös tätä raporttia koskevat kyselyt tulee kohdistaa. Yhteyshenkilö on tutkija Seppo Hanste.

1. Tuntivaihtelut

Tuntivaihtelu ilmoitetaan vaihtelukertoimella a' . Tuntivaihtelukerroin ilmaisee tietyn tunnin suhteellista osuutta koko vuorokauden liikenteestä.

$$a'_i = \frac{q_i}{Q}$$

q_i = ko. tunnin liikennemäärä

Q = koko vuorokauden liikennemäärä
(06-06)

Kuvissa ja taulukoissa tuntivaihtelukertoimet on esitetty prosentuaalisina osuuksina $a' \times 100$. Tuntivaihtelut on piirretty maaliskuun ja elokuun laskentajaksoista. Viikonlopun tuntivaihtelut (pe-su) esitetään vain päätieverkon osalta. Taulukoissa on esitetty erikseen kulta-kin laskentajaksolta tuntivaihtelukertoimet tunneittain sekä eräiltä tuntiryhmiltä.

2. Viikonpäivävaihtelut

Viikonpäivävaihtelu ilmoitetaan vaihtelukertoimella b' . Vaihtelukerroin ilmaisee tietyn viikonpäivän vuorokausiliikenteen suhteen koko viikon keskimääräiseen vuorokausiliikenteeseen.

$$b'_i = \frac{Q_i}{W}$$

jossa i = maanantai, tiistai...sunnuntai

Q_i = ko. päivän vuorokausiliikennemäärä

W = viikon keskimääräinen vuorokausiliikenne

W -arvoa laskettaessa on oletettu, että laskentaohjelman mukainen arkipäivä (yleisimmin torstai) edustaa keskimääräistä arkipäivää (ma-to).

3. Kausivaihtelut

Kausivaihtelu ilmoitetaan vaihtelukertoimella c' . Kausivaihtelukerroin ilmaisee viikon keskimääräisen vuorokausiliikenteen suhteen koko vuoden keskimääräiseen vuorokausiliikenteeseen.

$$c'_i = \frac{W_i}{KVL}$$

jossa W_i = viikon i keskimääräinen vuorokausiliikenne

KVL = koko vuoden keskimääräinen vuorokausiliikenne

Kausivaihtelukertoimet tässä raportissa esitetään kuukausittain ko. kuukauden puolivälissä. KVL-arvot on laskettu 12 W-arvon keskiarvona. Kesäliikennekertoimella d' ilmoitetaan kesän (kesä-, heinä- ja elokuu) keskimääräisen vuorokausiliikennemäärän suhde koko vuoden keskimääräiseen vuorokausiliikennemäärään.

$$d' = \frac{KKVL}{KVL}$$

jossa KKVL = kesän keskimääräinen vuorokausiliikenne

KVL = koko vuoden keskimääräinen vuorokausiliikenne

4. Taulukoiden lukuohjeet

Tuntivaihtelut

Listoilla on esitetty ajoneuvotyypeittäin kultakin tunnilta/tuntiryhmältä seuraavat tunnusluvut:
